

# Full Stack Engineer

At RedLore we are developing one-of-a-kind technology solutions that revolutionize the world of Logistics and Supply Chains. Today's pandemic is proving once again how essential it is in a globalized world to move physical goods in-time, in-full and without quality degradation. Unleashing technology to make that happen, that's what it's all about at RedLore.

If you are result-driven, ambitious, and passionate about shaping technology, we'd love to hear from you!

The creative brains at RedLore bring technology solutions to life from idea to mass-production. Our solutions span the range from a tiny wireless sensor with on-board machine learning, over cellular gateways, to cloud analytics and powerful dashboards.

## Your responsibilities include

- Designing architectures for IoT solutions that can scale up easily.
- Developing fast data processing and storage solutions.
- Ensuring security and adherence to data privacy policies.
- Developing backend and frontend software to support the requirements of our solutions.

## What we offer

- A thrilling and fast-paced working environment, where new ideas are brought to life on a weekly basis, where your ideas are taken seriously, and your work has a direct impact on the success of the company.
- A working environment where your colleagues are as enthusiastic and competent as you are, far from politics and slow decision making.
- A growth environment where your role can change in time to accommodate your personal ambitions in line with the company's needs.
- An attractive compensation schedule where your personal success is directly related to the company's success.

## Required qualifications

- You have a minimum of five years experience in back-end development and in one or more of the leading front-end stacks.
- You have experience working with cache techniques such as Redis.
- You have built at least 3 cloud solutions in the past.
- You have expert knowledge in at least one of the dominating cloud platforms (preferably Microsoft Azure).
- You are experienced in storing/managing large Time-Series Datasets.
- You are highly intelligent and have a strong analytical mindset.
- You have a very good command of English in reading, writing, and speaking.
- You are not held back by a dogmatic approach.
- You pride yourself on being 3x faster than the average developer.
- You are thrilled by the idea of creating technologies that the world has not seen before.
- You are not afraid to work hard to reach your goals.

## Other valuable qualifications (but not a deal breaker)

- You have experience working with IoT hardware.
- You hold a Bachelor's degree, Master's degree or Ph.D. in Computer Science (or related field).
- You have experience with IoT application development.

## Inclusion at RedLore

We fully embrace diversity because we believe it makes our company and our people better and stronger, regardless of gender, sexual orientation, race, religion, political affiliation, age, and disabilities.

*If your skillset and experience is close to the above but not quite 100%, we would still like to hear from you. We acknowledge that given the right mindset you can grow in the job. Just blow us away with your attitude and personality.*
